Professional Experience

Software Engineer **Dec 2024 – Present**

EarthQuest

- Built the game's web client in **React** and **TypeScript**, developing a reusable component library for quest logs, inventory, and character sheets shared across web and mobile views
- Created fluid character and combat animations with **GSAP** timelines and CSS keyframes, sticking to GPU-friendly transforms to hold a steady 60 FPS on mid-range mobile devices
- Migrated the marketing and patch-notes site to **Next.js** with static generation and image optimization, shipping less client-side JavaScript and cutting Largest Contentful Paint by 40%
- Integrated the Claude API into NPC dialogue with a RAG layer over game lore, streaming responses into the UI and caching frequent prompts to keep conversations in-world and responsive
- Set up AI-assisted code review and automated testing on GitHub Actions with Vitest and Playwright, catching UI regressions before merge and raising front-end test coverage to 80%

Software Engineer **Jun 2022 – Jul 2024**

Skyline Infrastructure

- Developed responsive, mobile-first interfaces for an infrastructure asset-monitoring platform using **React**, TypeScript, and SASS modules, translating Figma mockups into production UI
- Led an accessibility pass toward WCAG 2.1 AA, adding semantic HTML5, ARIA roles, keyboard navigation, and focus management, and resolving 120+ issues flagged in axe audits
- Built interactive data visualizations with **D3.js** and SVG for project timelines and sensor readings, using list virtualization to render 10K+ data points without UI lag
- Refactored legacy jQuery pages into modular ES6+ components with CSS transitions for state changes, and standardized cross-browser testing to close long-standing Safari layout bugs

Projects

AI-Powered Social Media Scheduler | *React, TypeScript, Node.js, Claude API, PostgreSQL* **2025**

- Built a drag-and-drop content calendar in **React** with live post previews that mirror each platform's layout, plus keyboard-accessible scheduling controls
- Used Claude to draft captions and alt text from uploaded media, with a Node.js job queue publishing posts on schedule and automatically retrying failed platform API calls

Accessible UI Component Kit | *React, TypeScript, SASS, GSAP, Storybook, Playwright* **2025**

- Built a **React** and TypeScript library of 25+ accessible UI components (modals, tabs, carousels, tooltips) with SASS-based theming and interactive Storybook docs
- Added GSAP and CSS transitions that respect prefers-reduced-motion, and wrote automated axe and Playwright tests that run across Chrome, Safari, and Firefox in CI

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SASS/SCSS, Python, SQL

Frameworks & Libraries: React, Next.js, GSAP (GreenSock), D3.js, Redux, Tailwind CSS, Node.js, Express

Databases: PostgreSQL, MongoDB, Redis, Firebase

Cloud & DevOps: AWS (S3, CloudFront), Vercel, Netlify, Docker, GitHub Actions, CI/CD

Tools & Practices: Git, GitHub, Jira, Figma, Vite, Webpack, Storybook, Claude Code, GitHub Copilot, Code Reviews, Agile/Scrum

Core Concepts: Responsive Web Design, Web Accessibility (WCAG, ARIA), Cross-Browser Compatibility, CSS Animations, Core Web Vitals, Component Architecture, Google Ad Manager, Jest, Vitest, Playwright

Education

University at Albany, SUNY, Albany, NY – Master's in Computer Science (AI/ML), GPA: 3.68/4.0
Gayatri Vidya Parishad College of Engineering, India – Bachelor's in Computer Science

Certifications

Oracle Certified Generative AI Professional | Oracle Certified Data Science Professional
